RE: WHITE CLOUD OPERATIONS, UTU-69852

Dear Mr. Simmons:

I believe we finally have our act together here and want to provide the following information and assurances in connection with the activities that have taken place on the White Cloud Claims.

We wish to amend our existing notice to include the drilling of 52 shallow exploratory holes on White Cloud #17. Said holes are pinpointed on the enclosed "Map of Proposed Mining, White Cloud #17" and are nearly touching the boundary line with White Cloud #19.

You will note that we are showing only one access road on the enclosed map. It has turned out that the second road which you found resulted from one of the drivers inadvertently taking the wrong route.

As we have indicated, we will plug the holes on #17 and will reclaim the area that was disturbed by the inadvertent second access road.

Please advise us if the foregoing adequately addressed the concerns of your office in this matter.

We believe we will be able to develop a market for the products found in the area of the drill sites and hope to be able to put together an operation that we will be presenting to your office as it is developed.

Thank you very much for your patience and professionalism. We really do appreciate your helpful attitude. Unfortunately it is becoming the unusual rather than the norm.

Sincerely,

SUTHERLAND BROS., INC.

Dear Mr. Simmons,

In reference to Maintaining
roads, it is intended to do
what is ~~now~~ needed to
replace and keep in a passable
and useable manner.

~~It is meant to~~
What is meant by maintaining
dumps and Portals is to
clean fallen rocks + debris, etc
from tops of dumps next to
Portals to keep in a useable
fashion.

Portals + tunnels often need
the rocks and dirt that slips off to
be cleared up and that is ~~it~~
my intentions.

Thank you
John L. Fisher
